GALIL MOTION CONTROL ON THE MOVE AS COMPANY RELOCATES TO ROCKLIN, CALIFORNIA

Quality of Life, Better Business Climate Cited as Key Factors

MOUNTAIN VIEW, Calif., July 24, 2000- Galil Motion Control, Inc., pioneer and leader of digital motion control technology, today announced it is relocating its corporate headquarters to Rocklin, CA, just east of Sacramento, effective August 22, 2000.

“We’re moving primarily because we’d like to offer our employees a better quality of life,” said Jacob Tal, Galil founder and president. “We feel that in the Bay Area, between the cost of living, crowding and hectic pace that people have less time to spend with their families and it’s impacting their lives.”

The entire Galil operation- headquarters, research/development, and product support - will move into a new 30,000+ square foot building in the Atherton Tech Center in Rocklin, California. The company will maintain a direct sales office in the Silicon Valley and continue to sell through distributors located throughout the world.

Tal said Galil had also evaluated other sites before deciding on Rocklin. A leading factor, he said, was Rocklin’s proximity to the Bay Area, making the move less demanding for employees who had family and other deep roots in the region.

The new business address for Galil Motion Control, Inc. is:

Galil Motion Control, Inc.
3750 Atherton Road
Rocklin, CA 95765
Phone: 916-626-0101
Fax: 916-626-0102
Toll-free: 800-377-6329

About Galil

Founded in 1983, Galil Motion Control, Inc. was the first company to produce a microprocessor-based servo motion controller without tachometer feedback. Since the introduction of their first controller, they have continued to advance the technology and now have over 200,000 controllers installed worldwide and are known as the industry pioneer and leader. Following in this tradition, Galil was recently first to market with a motion controller designed for the USB, and most recently with their Ethernet-based standalone controller. Galil is a privately held company and has been profitable for over 60 consecutive quarters. Today, you will see Galil controllers at work in such applications as machine tools, manufacturing and testing, food processing, textiles, semiconductor manufacturing, medical equipment and a wide range of test and measurement equipment.
