Galil Motion Control Achieves 100th Consecutive Quarter of Profitability *Strategic Choices Have Kept Business “In Motion”*

Rocklin, CA— Galil Motion Control is proud to announce that it has completed its 100th consecutive quarter of profitability. Despite several recessions, changes in technology and the competitive environment, since 1985 Galil has always kept its balance sheets in the black.

“We have made decisions to keep the company lean and nimble which has enabled us to stay strong despite the challenges in the economy,” said Wayne Baron, President of Galil Motion Control. “Our focus has remained on product development and application support based on genuine customer need.”

Since the introduction of their first servo motion controller in 1984, Galil has gone on to deliver over 500,000 motion controllers worldwide. Galil is currently shipping their 5th generation motion controllers- the Accelera Series which provide ultra high-speed and precision. Features include multi-axis coordinated motion, advanced PID with velocity and acceleration feed forward, multitasking, and non-volatile memory for programs, variables and arrays. Galil also sells plug-in, multi-axis drives for steppers and servos which save money, space and wiring.

“Our focus on extreme customer service has been fundamental to Galil’s success,” said Lisa Wade, Director of Sales and Marketing for Galil Motion Control. “We partner with customers to deliver cost-effective solutions that make a difference.”

Galil expanded into the I/O market with the introduction of its RIO-47xxx Pocket PLC. The RIO combines intelligence along with 16 analog and 32 digital I/O in a cost-effective, compact package. It can be used stand-alone or connected to the Ethernet for unlimited I/O expansion.

About Galil Motion Control, Inc. (www.galilmc.com)

Privately held and profitable for over 100 consecutive quarters, Galil Motion Control, Inc. was founded in 1983 by Jacob Tal and Wayne Baron. Galil became the first company to produce a microprocessor-based servo motor controller without tachometer feedback. Since then, Galil has continued to advance motion control technology and has found industry-leading acceptance with over 500,000 controllers successfully installed worldwide. Various applications include machines for the medical, semiconductor, machine tool, food processing and textile industries. Recently, Galil has introduced several motion and I/O controllers for the Ethernet including the high-speed Accelera motion controllers and the RIO Pocket PLC series.
